

St. Joseph's Catholic Primary School

Teaching and Learning Policy 2020-2021

Intent:

- To ensure a **consistent approach to high quality teaching and learning** throughout the school in order to **raise standards of achievement for pupils of all abilities**, including the most disadvantaged pupils and pupils with SEND or high needs through effective differentiation, support and challenge
- To ensure pupils are given opportunities to become imaginative, innovative and creative thinkers
- To ensure pupils build positive relationships with others by working collaboratively whilst also building their skills as independent learners
- To ensure pupils are able to develop and extend sound and secure knowledge and skills to apply what they know and can do with increasing fluency and independence in order to enable pupils to commit an increasing percentage of knowledge to long term memory, freeing up pupils working memory and avoid cognitive overload
- To ensure that remembering difficulty is appropriate. It should be hard in order to strengthen neurons and commit knowledge to long term memory
- To develop pupils schema through the teaching of specific content and allowing time to forget (spaced practice). Retrieval is interfering with the forgetting to commit to long term memory
- To ensure all pupils have secured key age and/or stage related basic skills to enable them to be fully prepared for their next year group

Implementation:

Our Teaching and Learning Policy is based on Rosenshine's Principles of Instruction (2012) which are drawn from the following three sources:

1. Research in cognitive science
2. Research on the classroom practices of master teachers
3. Research on cognitive support to help pupils learn complex tasks

St. Joseph's Catholic Primary School

Teaching and Learning Policy 2020-2021

1. Daily Review:

- Provide opportunities to review prior learning
- Daily review reinforces prior learning and strengthens the connections
- Desirable difficulty ensures that learning tasks which require a considerable but desirable effort, thereby improving long term performance
- Aim of developing automatic recall to free up working memory for problem-solving and creativity

2. New Material in Small Steps:

- The curriculum is coherently planned and sequenced towards accumulating sufficient knowledge and skills for future learning.
- Long, medium and short term planning should chunk new learning into small steps which build progressively upon prior knowledge and move on only when first steps are mastered.
- Pupils are consolidating and embedding previous skills/knowledge as well as learning something new.
- Teach by giving a series of short presentations using many examples and guided practice
- Present subject matter clearly, promoting appropriate discussion about the subject matter and teaching
- This is because the working memory is small, only handling a few bits of information at once so we present new material in small steps to avoid overload

3. Ask Questions:

- Balance of open and closed questions
- Questions to check and deepen understanding
- Opportunities for pupils to ask questions to teachers, each other and themselves
- Questions allow teachers to determine how well the material is learned

St. Joseph's Catholic Primary School

Teaching and Learning Policy 2020-2021

4. Provide Models:

- Pupils need cognitive support to help them learn how to solve problems.
- Learning objectives and intended outcomes are clearly communicated and understood by all pupils.
- Clear and concise teacher modelling.
- Thinking out loud, explaining the metacognitive process to help clarify the specific steps involved.
- Use a range of resources to deepen understanding, including worked examples, concrete resources and WAGOLs (What a good one looks like).
- Use of working walls and the development of an enabling learning environment which supports pupils' growing independence.

5. Guide Student Practice:

- Provide opportunities for pupils to practice taught skills.
- Give pupils additional time to rephrase, elaborate and summarise new material in order to store it in their long term memory.
- Support staff have an active supportive role for pupils and have a direct impact on moving learning forward whilst promoting pupil independence

6. Check Student Understanding Systematically:

- Staff use assessment for learning strategies routinely to enable them to differentiate and direct support effectively in order to meet the needs of all pupils by:
 - Asking questions to check pupil understanding by asking them to explain their thinking and summarise their learning
 - Providing opportunities for pupils to explain to each other, requiring retrieval of that information
 - Identifying and addressing misconceptions in pupils work through instant feedback
 - Staff respond and adapt their teaching as necessary

St. Joseph's Catholic Primary School

Teaching and Learning Policy 2020-2021

7. Obtain High Success Rate:

- Challenge is used in all lessons to promote progression and a range of opportunities for pupils to experience, rehearse, apply and master skills
- Activities are pitched at the appropriate level to challenge all pupils of different abilities
- Providing systematic feedback and corrections through the use of instant verbal feedback and live marking
- Expectations of work presentation and behaviour for learning are consistently high

8. Scaffolds for Difficult Tasks:

- Temporary scaffolding to assist learning with the expectation that this will be removed
- Scaffolds are part of pupils cognitive apprenticeship
- WAGOLs
- WABOLs which anticipate pupils' likely errors/misconceptions
- Teacher modelling
- Teacher thinking aloud to model the metacognitive process
- Resources, e.g. concrete, cue cards, checklists
- Resources are well prepared, appropriately matched to support the learners and are fully utilised

9. Independent Practice:

- Independent practice produces 'overlearning' - a necessary process for new material to be recalled automatically
- Independent practice ensures no overloading of pupils' working memory, increasing the storage strength of the information as it becomes more embedded in long term memory
- Examples of independent practice include daily Maths basic skills each morning during registration

St. Joseph's Catholic Primary School

Teaching and Learning Policy 2020-2021

10. Weekly & Monthly Review:

- Pupils must have extensive practice in order to develop well-connected networks of ideas (schemas) in their long-term memory
- Material should be adequately practiced and reviewed so that it is not easily forgotten
- Regular opportunity to recall recently learned material will result in the material being embedded within long term memory. The more this happens, the easier it is to connect new material to such prior knowledge
- Knowledge stored in long term memory that is organised into patterns only occupies a tiny amount of space in our limited working memory. Having larger and better connected patterns of knowledge frees up space in pupils' working memory
- Weekly low-stakes quizzes are used to review prior learning
- Desirable difficulty ensures learning tasks require a considerable but desirable effort, thereby improving long term performance

Impact:

- Development of pupils' vocabulary
- Development of pupils' understanding of key concepts
- Development of pupils' knowledge base
- Pupils ability to follow taught procedures

Science of Learning theory
1. Cognitive load
2. Building Knowledge
3. Storage and retrieval (long term memory)

Appendix 1: Rosenshine's Principles of Instruction (2012) :

THE PRINCIPLES OF INSTRUCTION

TAKEN FROM THE INTERNATIONAL ACADEMY OF EDUCATION

This poster is from the work of Barak Rosenshine who based these ten principles of instruction and suggested classroom practices on:

- research on how the brain acquires and uses new information
- research on the classroom practices of those teachers whose students show the highest gains
- findings from studies that taught learning strategies to students.

HOW2
teachingtime.com

01 DAILY REVIEW

Daily review is an important component of instruction. It helps strengthen the connections of the material learned. Automatic recall frees working memory for problem solving and creativity.

02 NEW MATERIAL IN SMALL STEPS

Our working memory is small, only handling a few bits of information at once. Avoid its overload — present new material in small steps and proceed only when first steps are mastered.

03 ASK QUESTIONS

The most successful teachers spend more than half the class time teaching, demonstrating and asking questions. Questions allow the teacher to determine how well the material is learned.

04 PROVIDE MODELS

Students need cognitive support to help them learn how to solve problems. Modelling, worked examples and teacher thinking out loud help clarify the specific steps involved.

05 GUIDE STUDENT PRACTICE

Students need additional time to rephrase, elaborate and summarise new material in order to store it in their long-term memory. More successful teachers built in more time for this.

06 CHECK STUDENT UNDERSTANDING

Less successful teachers merely ask "Are there any questions?" No questions are taken to mean no problems. False. By contrast, more successful teachers check on all students.

07 OBTAIN HIGH SUCCESS RATE

A success rate of around 80% has been found to be optimal, showing students are learning and also being challenged. Better teachers taught in small steps followed by practice.

08 SCAFFOLDS FOR DIFFICULT TASKS

Scaffolds are temporary supports to assist learning. They can include modelling, teacher thinking aloud, cue cards and checklists. Scaffolds are part of cognitive apprenticeship.

09 INDEPENDENT PRACTICE

Independent practice produces "overlearning" — a necessary process for new material to be recalled automatically. This ensures no overloading of students' working memory.

10 WEEKLY & MONTHLY REVIEW

The effort involved in recalling recently-learned material embeds it in long-term memory. And the more this happens, the easier it is to connect new material to such prior knowledge.
